6	<b>BMP &amp; Restoration Effectiveness:</b> The State will monitor watersheds where water restoration projects (e.g., FDEP-adopted Basin Management Action Plans) have been planned and/or implemented to validate/ verify WQ changes in those waterbody segments. Using data obtained before and after project implementation, State will assess the effectiveness of the water restoration strategies for attainment of water quality standards and designated uses. Some specific watersheds with adopted BMAPs include: Lower St. Johns River Tributaries, Lake Jesup, Bayou Chico and Santa Fe River.	Program Priority\ 2.2.1 SP-10 SP-11 SP-12	Output: Submit results in FDEP reports (e.g., BMAP Progress Reports) for the water restoration projects where post project monitoring has been initiated or completed. Submit monitoring data and information to a national database (e.g., WQX, GRTS) and assessment results in ADB compatible format.	12/31/13

7	<b>Third Party Data:</b> To enhance limited monitoring resources, and reduce duplication of efforts, the State will scientifically review "all existing and readily-available" data (FDEP & third party), for compelling evidence of water quality impairment or improvement and will use these data as indicators of water quality as appropriate. Where warranted, the State will monitor to supplement the available data to meet data requirements and thresholds for determining the waterbody's use support status and to confirm the actual water quality condition. The State will encourage other agencies and organizations to target monitoring to define baseline conditions or watershed improvement/restoration, where such monitoring is judged appropriate by State.	Program Priority <b>2.2.1</b>	Output: Report use of third party data as indicator of change and as supplemental data in determination of waterbody water quality.	4/1/13
